ACADEMIC DETAILS

COURSE	SPECIALIZATION	BOARD	SCORE	YEAR
CLASS XII	SCIENCE	PU Board	93.00%	2023-24
CLASS X	SCIENCE	ISCE	97.40%	2021-22

INTERNSHIPS AND PROFESSIONAL EXPERIENCE

- **Research Intern | BITS Pilani, K. K. Birla Goa Campus | Jan 2026 – May 2026** *Under Dr. Nitin Sharma, Dept. of Electrical & Electronics Engineering*

Dr. Nitin Sharma is an expert in GNSS Signal Processing and member of the Bureau of Indian Standards (BIS) committee for aerospace and positioning systems.

- Developed a GNSS Simulation & Verification Interface using Electron, React, and Node.js to bridge path planning with low-level signal processing
- Automated verification workflows by integrating MATLAB SDR and PocketSDR for real-time signal acquisition and accuracy validation.
- Configured SDR hardware presets for HackRF, PlutoSDR, and USRP, optimizing the simulation environment for research use.

- **Jaza Software – Web Development Intern | Bangalore Urban, India | May – Jul 2025**

Jaza Software OPC Ltd. is a B2B SaaS company driving sustainable growth in the manufacturing sector by providing smart software solutions that leverage actionable intelligence, optimize operational efficiency, and deliver game-changing technology to its clients

- Developed and deployed interactive UI components using React.js, JavaScript, HTML5, CSS3.
- Contributed to responsive design and optimized client-side performance for enterprise-grade applications.
- Collaborated with backend engineers to integrate REST APIs into the frontend.

PROJECTS AND HACKATHONS

- **GNSS-SDR Simulation & Verification Desktop Suite – Study Oriented Project**
- Integrated map-based path planning via OpenLayers, allowing users to convert custom trajectories into high-fidelity RF signal binaries using gps-sdr-sim.
- Engineered a custom dark-themed UI and modular backend to streamline SDR hardware configuration (HackRF, PlutoSDR, USRP) for research environments.

- **StackIt – Minimal Q&A Forum Platform (Odoo Hackathon 2025) | Team Lead**
- Built a scalable forum with React + Redux frontend and backend, supporting authentication and AI-assisted query suggestions.
- Designed modular API architecture ensuring secure DB access only through server.
- Led a 4-member team coordinating frontend and backend integration.

- **Mission CTRL | Seds Celestia – Space Tech Hackathon | Team Lead**
- Developed a web-based space exploration interface with interactive UI and visualizations.
- Focused on real-time data handling and engaging user design.

- **Textile Explorer – Internship Project**
- Built a textile manufacturing processes explorer tool for creating awareness .
- Focused on data preprocessing, visualization, and classification tasks

ACHIEVEMENTS

- **Winner of 2 Hackathons (Techgyan GenAI Hackathon, Seds Celestia).**
- **Selected for campus leadership positions (Treasurer Elect - Council for Student Affairs, Project Lead- Nirmaan, Project Lead-Abhigyaan).**
- **Consistently among the top contributors in team-based technical projects.**

SKILLS

- **Programming & Web: React.js, JavaScript (ES6+), HTML5, CSS3, Python, C, C++, Node.js**
- **Frameworks & Tools: Electron, OpenLayers, MATLAB, Flask, Redux, Git, SDR (HackRF/Pluto/USRP)**
- **Domains: GNSS Signal Processing, Full-Stack Development, AI/ML, System Architecture, Fintech**
- **Other Skills: Team Leadership, Financial Analysis, Technical Documentation, Public Speaking**
